

Lab Assignment 07

HOMEWORK

Task 1

Implement the design of the Butterfly class and the Moth class so that these classes extend from the Caterpillar class and generate the output as follows.

- Butterfly loses 5 units of energy due to flying and gains 5 energy units per food amount
- Moth loses 2.5 units of energy due to nocturnal activity and gains 2.5 energy units per food amount

Given Code	Expected Output
<pre>public class Caterpillar_Tester { public static void main(String[] args) { Caterpillar c = new Caterpillar("Leaf", 5); c.showDetails(); System.out.println("-----1-----"); c.eat(); c.eat(3); c.showDetails(); System.out.println("-----2-----"); Butterfly b = new Butterfly("Flower", 2); Moth m = new Moth("Cotton", 4); System.out.println("-----3-----"); b.transform(); m.transform(); System.out.println("-----4-----"); b.eat(2); m.eat(5); System.out.println("-----5-----"); b.showDetails(); m.showDetails(); } } public class Caterpillar { public String food; public int age; public double energy; public Caterpillar(String food, int age) { this.food = food; this.age = age; this.energy = 0; } public void eat() { energy += 1; System.out.println("Caterpillar ate 1 unit of food"); } public void eat(int amount) { energy += amount; System.out.println("Caterpillar ate " + amount + " units of food"); } public void transform() { System.out.println("Caterpillar transforms"); } public void showDetails() { System.out.println("Food: " + food); System.out.println("Age: " + age); System.out.println("Energy: " + energy); } }</pre>	<pre>Food: Leaf Age: 5 Energy: 0.0 -----1----- Caterpillar ate 1 unit of food Caterpillar ate 3 units of food Food: Leaf Age: 5 Energy: 4.0 -----2----- -----3----- Caterpillar transforms into Butterfly Caterpillar transforms into Moth -----4----- Butterfly lost energy while flying and absorbed nectar Moth lost energy due to nocturnal activity -----5----- Food: Flower Age: 2 Energy: 5.0 joules Food: Cotton Age: 4 Energy: 10.0 joules</pre>

Task 2

You are given the Audience class. You need to design the Concert (Parent) and VIPConcert (Child) classes so that the following tester code generates the desired output.

Hint: Assume a maximum of 5 artists can be added to a concert. Ticket Pricing:

- Zone A: 500 per ticket
- Zone B: 1,000 per ticket
- Zone VIP: 2,000 per ticket

Driver Code and Given Class	Output
<pre> public class Audience { private String name; public Audience(String name) { this.name = name; } public void buyConcertTicket(Concert concert, String zone, int quantity) { System.out.println(name + " bought " + quantity + " ticket(s) in Zone " + zone); concert.buyTicket(zone, quantity); } public void buyConcertTicket(Concert concert, String zone) { System.out.println(name + " bought 1 ticket(s) in Zone " + zone); concert.buyTicket(zone); } public void buyConcertTicket(VIPConcert concert) { System.out.println(name + " bought 1 ticket(s) in Zone VIP"); concert.buyTicket(); } } //Tester Class public class ConcertTester{ public static void main(String[] args) { Concert concert = new Concert("ABC Conference Center","7:00 PM"); concert.showDetails(); System.out.println("-----1-----"); concert.addArtist("Tahsan Khan"); concert.addArtist("Habib Wahid"); concert.showDetails(); System.out.println("-----2-----"); Audience a1 = new Audience("Sarah"); Audience a2 = new Audience("Alex"); System.out.println("-----3-----"); a1.buyConcertTicket(concert, "A", 3); a2.buyConcertTicket(concert, "B"); System.out.println("-----4-----"); concert.showDetails(); System.out.println("-----5-----"); VIPConcert vipConcert = new VIPConcert("Army Stadium","10:00 PM"); vipConcert.addArtist("Atif Aslam"); Audience a3 = new Audience("Emily"); a3.buyConcertTicket(vipConcert); System.out.println("-----6-----"); vipConcert.showDetails(); System.out.println("-----7-----"); Concert.showTotalTicketsSold(); } } </pre>	<pre> Venue: ABC Conference Center Showtime: 7:00 PM Artist: Tickets sold in this concert: 0 -----1----- Venue: ABC Conference Center Showtime: 7:00 PM Artist: -Tahsan Khan -Habib Wahid Tickets sold in this concert: 0 -----2----- -----3----- Sarah bought 3 ticket(s) in Zone A Total price: 1500 Alex bought 1 ticket(s) in Zone B Total price: 1000 -----4----- Venue: ABC Conference Center Showtime: 7:00 PM Artist: -Tahsan Khan -Habib Wahid Tickets sold in this concert: 4 -----5----- Emily bought 1 ticket(s) in Zone VIP Total price: 2000 -----6----- Venue: Army Stadium Showtime: 10:00 PM Artist: -Atif Aslam Tickets sold in this concert: 1 -----7----- Total tickets sold (all venues): 5 </pre>

Task 3

Given the following classes, write the code for the **CarDriver** and the **BikeDriver** class so that the following output is printed.

Driver Code and Parent Class	Expected Output
<pre>import java.util.Arrays; public class PathaoRideManager{ public static void main(String[] args) { System.out.println("1.====="); GenericDriver d = new GenericDriver(); System.out.println("2.====="); d.hasSafetyTraining(); System.out.println("3.====="); BikeDriver d1 = new BikeDriver("John", "Not Premium"); System.out.println("4.====="); System.out.println(d1); System.out.println("5.====="); System.out.println(d1.acceptRide(false)); System.out.println("6.====="); d1.hasSafetyTraining(); System.out.println("7.====="); CarDriver d2 = new CarDriver("Max"); System.out.println("8.====="); System.out.println(d2); System.out.println("9.====="); d2.hasSafetyTraining(); System.out.println("10.====="); System.out.println(d2.acceptRide(true)); System.out.println("11.====="); System.out.println(d2); System.out.println("12.====="); BikeDriver.restrictedAreas("Airport Road"); BikeDriver.restrictedAreas("Defense Area"); BikeDriver.restrictedAreas("Navy Base"); System.out.println(Arrays.toString(BikeDriver.restrictedAreas)); System.out.println("13.====="); d1.fightRestriction(new String[]{"Defense Area", "Banani", "Uttara"}); System.out.println("14.====="); CarDriver.restrictedAreas("Cantonment"); CarDriver.restrictedAreas("Road 27"); System.out.println(Arrays.toString(CarDriver.restrictedAreas)); System.out.println("15.====="); d2.fightRestriction(new String[]{"Defense Area", "Road 27"}); } } public class GenericDriver { private String name; public GenericDriver() { System.out.println("Welcome to Pathao!"); } public GenericDriver(String name) { this.name = name; System.out.println("Welcome to Pathao Driver Panel!"); System.out.println(this.name + " has been registered as a Pathao driver!"); } public String getName() { return name; } public void hasSafetyTraining() { System.out.println("All drivers must have safety training."); } public String acceptRide(boolean hasVehicle) { String s = "All Pathao drivers can accept rides. "; if (!hasVehicle) s += "Driver does not have a verified vehicle. "; else s += "Driver has a verified vehicle. "; return s; } }</pre>	<pre>1.===== Welcome to Pathao! 2.===== All drivers must have safety training. 3.===== Welcome to Pathao Driver Panel! John has been registered as a Pathao driver! 4.===== John's driver profile is Not Premium 5.===== All Pathao drivers can accept rides. Driver does not have a verified vehicle. John's driver profile is Not Premium 6.===== All drivers must have safety training. 7.===== Welcome to Pathao Driver Panel! Max has been registered as a Pathao driver! 8.===== Max's driver profile is a Premium 9.===== All drivers must have safety training. Premium drivers receive extra safety briefings. 10.===== All Pathao drivers can accept rides. Driver has a verified vehicle. Max's driver profile is Premium 11.===== Max's driver profile is a Premium 12.===== [Airport Road, Defense Area, Navy Base] 13.===== John cannot enter Defense Area John can enter Banani John can enter Uttara 14.===== [Cantonment, Road 27] 15.===== Max can enter Defense Area Max cannot enter Road 27</pre>

Task 4

Design the Car and ElectricCar classes so that the following output is produced. The ElectricCar class and Car class should inherit from the Vehicle class.

Driver Code and Parent Class	Output
<pre>public class VehicleShowroom { public static void main(String[] args) { Car c1 = new Car("Toyota Camry", 25000, 4); System.out.println("-----1-----"); c1.vehicleDetail(); System.out.println("-----2-----"); Car.showAllAvailableCars(); System.out.println("-----3-----"); Car c2 = new Car("Honda Civic", 22000, 4); Car c3 = new Car("Ford Mustang", 35000, 2); Car.markAsSold(c1); Car.markAsSold(c2); System.out.println("-----4-----"); c2.vehicleDetail(); System.out.println("-----5-----"); Car.showAllCars(); System.out.println("-----6-----"); ElectricCar e1 = new ElectricCar("Tesla Model 3", 45000, 75); ElectricCar e2 = new ElectricCar("Nissan Leaf", 32000, 60); ElectricCar e3 = new ElectricCar("Nissan Leaf", 32000, 60); System.out.println("-----7-----"); e1.vehicleDetail(); System.out.println("-----8-----"); e3.vehicleDetail(); System.out.println("-----9-----"); ElectricCar.markAsSoldEV(e1); ElectricCar.markAsSoldEV(e2); ElectricCar.markAsSoldEV(e3); } } public class Vehicle { public String model; public int price; public boolean sold; public String vehicleId; public Vehicle(String model, int price) { this.model = model; this.price = price; this.sold = false; this.vehicleId = ""; } public void vehicleDetail() { System.out.println("Model: " + model + ", Price: \$" + price); System.out.print("Status: "); if(sold){ System.out.print("Sold\n"); } else{ System.out.print("Available\n"); } } }</pre>	<pre>Vehicle ID: CAR001 created -----1----- Model: Toyota Camry, Price: \$25000 Status: Available Type: Regular Car Seats: 4 -----2----- Total Car: 1 Available Cars: CAR001 : Toyota Camry -----3----- Vehicle ID: CAR002 created Vehicle ID: CAR003 created -----4----- Model: Honda Civic, Price: \$22000 Status: Sold Type: Regular Car Seats: 4 -----5----- Total Car: 3 CAR001 : Toyota Camry - sold CAR002 : Honda Civic - sold CAR003 : Ford Mustang - available -----6----- Vehicle ID: EV000 created Vehicle ID: EV000 created Vehicle ID: EV000 created -----7----- Model: Tesla Model 3, Price: \$45000 Status: Available Type: Electric Vehicle Battery Capacity: 75 kWh -----8----- Model: Nissan Leaf, Price: \$32000 Status: Available Type: Electric Vehicle Battery Capacity: 60 kWh -----9-----</pre>

Task 5

Design the **Manager** and **Developer** class derived from the **Employee** class with appropriate attributes and properties so that the driver code can generate the output given below. [Hint:

Manager:

1. Adds a bonus to the base salary if the manager works more than 40 hours.
2. If the manager works more than 100 hours, the full amount is approved; if they work more than 80 hours, half the amount is approved. Otherwise, the increment is denied.

Developer:

1. Adds \$700 to the base salary if the developer works with Java programming language.]

Driver Code and Parent Class	Output
<pre>public class Employee { public String name; private double baseSalary; private int hoursWorked; public Employee(String name, double baseSalary, int hoursWorked){ this.name = name; this.baseSalary = baseSalary; this.hoursWorked = hoursWorked; } public double getBaseSalary() { return baseSalary; } public void setBaseSalary(double baseSalary) { this.baseSalary = baseSalary; } public int getHoursWorked() { return hoursWorked; } public void setHoursWorked(int hoursWorked) { this.hoursWorked = hoursWorked; } public void displayInfo() { System.out.println("Name: " + name); System.out.println("Base Salary: \$" + baseSalary); System.out.println("Work Hours: " + hoursWorked); } } public class EmployeeTester { public static void main(String[] args) { Manager neymar = new Manager("Neymar", 1000, 45, 10); Developer messi = new Developer("Messi", 1000, 50, "Java"); Developer chiesa = new Developer("Chiesa", 1000, 50, "Javascript"); neymar.calculateSalary(); System.out.println("1.====="); neymar.displayInfo(); System.out.println("2.====="); neymar.requestIncrement(100); System.out.println("3.====="); neymar.setHoursWorked(85); neymar.requestIncrement(100); System.out.println("4.====="); neymar.calculateSalary(); System.out.println("5.====="); neymar.displayInfo(); System.out.println("6.====="); messi.calculateSalary(); System.out.println("7.====="); messi.displayInfo(); System.out.println("8.====="); chiesa.calculateSalary(); System.out.println("9.====="); chiesa.displayInfo(); } }</pre>	<pre>1.===== Name: Neymar Base Salary: \$1000.0 Work Hours: 45 Bonus: 10.0 % Final Salary: \$1100.0 2.===== Increment denied. 3.===== \$50 Increment approved. 4.===== 5.===== Name: Neymar Base Salary: \$1050.0 Work Hours: 85 Bonus: 10.0 % Final Salary: \$1155.0 6.===== 7.===== Name: Messi Base Salary: \$1000.0 Work Hours: 50 Language: Java Final Salary: \$1700.0 8.===== 9.===== Name: Chiesa Base Salary: \$1000.0 Work Hours: 50 Language: Javascript Final Salary: \$1000.0</pre>

Task 6

1	public class A {
2	public static int temp = 4;
3	public static int x = -10;
4	public int sum, y;
5	public A() {
6	y = temp - 2;
7	sum = temp + 1 + this.x;
8	temp -= 2;
9	}
10	public A(int x){
11	this.methodA(3,5);
12	}
13	public void methodA(int m, int n) {
14	y = y + m + (temp++);
15	x = x + 1 + n;
